RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 128 pages. Dimensions: 9.7in. x 7.4in. x 0.3in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1889 Excerpt: . . . of the degree 1, two of the degree 2, and two of the degree 3, but these are connected by an equation of the degree 6. The irreducible covariant of the degree 1 is of course the quartic itself U , the other irreducible covariants are those already spoken of and represented by J , JET , J , respectively (J is of the degree 2 and the order 0, and J is of the degree 3 and the order 0, i. e. J and J are invariants, H is of the degree 2 and the order 4, E is of the degree 3 and the order 6). 52. For a quintic, the number of irreducible covariants of the degree 6 is $0.1 \text{ flg } x^2 4a^6 64 \text{ and } k^5 f^9 a^6 10a^7 12a^8 10x^9 108x^6 124x^5 15x^16$. COett X m $(1-x^2)^2 (1-a;4) (1-O)$ (1-O the numerator of which is $(1 \text{ xf } (1-x^2 a;2 a^2 a;4 3a^6 57 a^3 a;9 2a;10 x^11 2a^12 a^13 x^1)$; the first factor is $(1-x)^2 (1-a;2)^2$, the second factor is $(1-a)(l-a;2)-2(l-a)-3(l-a;5)-2(l-a;5)-2!-(l-l-C1-K1-C1)-19---!$ which does not terminate; hence incorrect the number of irreducible covariants is infinite. Substituting the preceding values, the expression for the number of the asyzygetic covariants of the degree 6 is coeff. afim $(1-x)^l (l-2)-2(l-a)-(l-3)(l-5)(l-6)4(l-5)(l-9)(l-10)(l-11)19---$ which agrees with a previous result: the numbers of irreducible covariants for the degrees 1, 2, 3, 4 are 1, 2, 3 and 3 respectively, and for the degree 5, the number of irreducible covariants is three, but there is one syzygy...
