

Methods for Real-Time Measurement of THMs and HAAs in Distribution Systems (Paperback)

Filesize: 8.14 MB

Reviews

The most effective pdf i ever read through. I am quite late in start reading this one, but better then never. Its been developed in an exceedingly simple way in fact it is only soon after i finished reading through this pdf by which in fact altered me, modify the way i think.

METHODS FOR REAL-TIME MEASUREMENT OF THMS AND HAAS IN DISTRIBUTION SYSTEMS (PAPERBACK)

DOWNLOAD

Iwa Publishing, United Kingdom, 2005. Paperback. Book Condition: New. 274 x 208 mm. Language: English Brand New Book ***** Print on Demand *****.Analytical methods are needed for on-line monitoring to improve understanding of variations in trihalomethanes (THMs) and haloacetic acids (HAAs) concentrations in treatment plants and drinking water distribution systems. The monitoring data will increase understanding of how peak THMs and HAAs formation events occur and when they do not occur, allowing operators to adjust treatment processes accordingly at the plant and in the distribution system. This project is the first of two phases. The goal of the first phase of this project was to conduct an extensive survey of the literature to evaluate which existing analytical methods may be adapted for real-time monitoring of THMs and HAAs in drinking water distribution systems. THMs and HAAs are both disinfection by-products (DBPs) of water chlorination. They are very different in their chemical structures and properties. The THMs are non-polar and volatile. The HAAs are polar and non-volatile. These differences have significant implications in their analytical chemistry applied to drinking water-particularly the sampling-sample preparation step. The concentrations of THMs can be determined using gas chromatography. The major advantage of gas chromatography is its simplicity. The analysis of the HAAs using gas chromatography is more complicated. To be analyzed by gas chromatography, HAAs must be derivitized, thus complicating analysis. The approach of this research is to explore alternative methods that might be adapted for real-time monitoring of THMs and HAAs in water distribution systems. The literature provides much information pertaining to the analysis of THMs and HAAs in drinking water. The goal was to collect data about the operating parameters used in the methods to aid in evaluating the adaptability for real-time monitoring in drinking water. These methods include a wide array of...
